

Requirements Report For MTK Techshop:

The MTK Techshop has successfully managed to incorporate 4 out of the 11 requirements. For the requirements that were incorporated, we will start with login and registration. The login and registration system is in place and can be used with no issue. Additionally, it incorporates two more requirements such as Account Data and password security as the website saves the registered account into the database if it meets the password security requirements. To build upon this, we have created product pages for some requirements however, they do not show the quantity and reviews for the product. Now to discuss the requirements we have not met, we have not met the requirements for Purchasing, Refund/Cancellation, Order History, Cart, Purchase information, and Rate/Review. We intended to keep working on this project and ensure we obtain all of these requirements for the site in the future.
